most approaches that contribute to the design of life critical systems almost only consider nominal situations where procedures can be developed and used to achieve satisfactory operations these kinds of approaches lead to rigid ways of doing things and poorly address the needs for flexibility especially when things go wrong it is not a matter of human adaptation but of human systems integration hsi flexibility hsi flexibility requires cross fertilization of appropriate experiences combined with creativity this book provides risk management approaches and methods for combining prevention and design features discusses risk management approaches and methods for combining prevention and design examines a transdisciplinary approach to risk management in design and operations of safer life critical systems proposes an approach of work analysis during design which enables design teams to consider hsi issues early enough to fix organizational problems upstream teaches the combination of prevention and design for safety management this book gathers and analyzes relevant field data to rationalize human and systems

checklists are used by the flight crew to properly configure an aircraft for safe flight and to ensure a high level of safety throughout the duration of the flight in addition the checklist provides a sequential framework to meet

cockpit operational requirements and it fosters cross checking of the flight deck configuration among crew members this study examined the feasibility of integrating multiple checklists for non normal procedures into a single procedure for a typical transport aircraft for the purposes of this report a typical transport aircraft is one that represents a midpoint between early generation aircraft b 727 737 200 and dc 10 and modern glass cockpit aircraft b747 400 777 and md 11 in this report potential conflicts among non normal checklist items during multiple failure situations for a transport aircraft are identified and analyzed the non normal checklist procedure that would take precedence for each of the identified multiple failure flight conditions is also identified the rationale behind this research is that potential conflicts among checklist items might exist when integrating multiple checklists for non normal procedures into a single checklist as a rule multiple failures occurring in today s highly automated and redundant system transport aircraft are extremely improbable in addition as shown in this analysis conflicts among checklist items in a multiple failure flight condition are exceedingly unlikely the possibility of a multiple failure flight condition occurring with a conflict among checklist items is so remote that integration of the non normal checklists into a single checklist appears to be a plausible option foernsler lynda j langley research center rtop 522 14 11 01
